

Accounting for Financial Professionals

Description and Methodology

Training The Street's accounting seminars are designed to prepare either New Hires or Summer Interns for the challenges of Corporate Valuation and Financial Modeling by providing the building blocks that are employed in these methodologies. Oriented around interpreting financial results, these seminars weave classroom lecture, in-class exercises and critical thinking developed through reading financial statements of live companies into a solid understanding of financial statements. Our content was developed by an accounting expert that has a unique combined experience as a preparer, auditor and user (analyst) of financial statements. This unique perspective was then tempered with TTS's finance class-room delivery expertise to provide the optimal amount of accounting to prepare participants for success as a financial professional – not to be an accountant. The seminars are presented with a creative delivery and flow that allows beginners to maintain their measured pace and yet keep the advanced participants engaged.
